<b>Discharge Date: 11/22/16</b>
<b>Discharged To Community</b>
<b>Length of Stay 63 Days</b>
<b>Reason for Stay: Cellulitis</b>
<b>How did this patient hear about Sans Souci?</b> Hospital

Please share your patient’s positive experience including highlights, obstacles overcome and information critical to this being a successful patient experience.

**Details of Experience:**

Warren was admitted to Sans Souci Rehabilitation and Nursing Center from Saint Johns Riverside Hospital on September 20<sup>th</sup> 2016 secondary to new onset of decline in functional mobility. The patient had a medically complicated stay secondary to past medical history that was significant for vascular necrosis of left femoral head, arrhythmia, bacteremia, Charcot’s joint at ankle, Osteomyelitis of right ankle which occurred approximately two years ago and chronic left hip pain. When Warren was initially assessed by our therapy team, he presented with low self-efficacy requiring continuous positive reinforcement/encouragement for initiation and participation. Additionally, Warren also demonstrated decreased retention and carryover during activities of daily living tasks and retraining. Despite the hardships he encountered along the way, Warren made steady and consistent progress throughout his stay at Sans Souci. He was able to improve baseline function from maximum assist and/or total dependence with attempts to initiate to modified independence/set-up. When Warren was ready to discharge on November 22<sup>nd</sup> 2016, he was able to ambulate up to 100 feet with rolling walker with supervision. Warren was ecstatic he made such a great recovery and is happy to be home with his loving family for the Holiday Season. This could not have been possible without the Amazing Therapy team at Sans Souci!!
